Mark Scheme

Q1.

Question Number	Acceptable Answers	Additional guidance	Mark
	An image formed from the apparent divergence of light rays from a single point Or an image that cannot be projected on to a screen		1

Q2.

Question Number	Acceptable Answers	Additional guidance	Mark
	Light rays pass through the image Or		,
	Light rays converge to a point (1) where the image is formed		1

Q3.

Question Number	Acceptable Answers		Additional guidance	Mark
	increases the power (of the eye) Or to decrease the image distance Or to shorten the focal length (of the eye and lens) Or to the eye it makes the rays appear to come from an object further away	(1)	If a candidate states that the image is formed at the focal point or that the retina is at the focal point do not award this mark	1

Q4.

Question Number	Acceptable answers	Additional guidance	Mark
	 Pass light through one lens of the glasses and view the light through the lens of the second pair of glasses. Rotate one pair of glasses through 90° (1) If the light intensity varies then the glasses use polarising filters (1) 	Allow full credit for a suitably annotated diagram.	2

Q5.

Question Number	Acceptable answers		Additional guidance	Mark
	• Use of $n = c/v$	(1)	Example of calculation $1.52 = 3.00 \times 10^8 \text{ m s}^{-1} / v$	
	• $v = 2.0 \times 10^8 \mathrm{m \ s^{-1}}$	(1)	1.97 × 10 ⁸ m s ⁻¹	2

Q6.

Question Number	Acceptable answers		Additional guidance	Mark
	• Use of $n = c/v$	(1)	Example of calculation $v = c/n$	
	• $v = 2.1 \times 10^8 \text{ m s}^{-1} \text{ (allow ecf from (a))}$	(1)	= $3.00 \times 10^8 \text{ m s}^{-1} / 1.42$ = $2.11 \times 10^8 \text{ m s}^{-1}$	2

Q7.

Question Number	Acceptable answers	Additional guidance	Mark
	Use of trigonometry to determine angle of ray to normal in liquid	Example of calculation $(10.2 - 4.0) \div 2 = 3.1 \text{ cm}$	
	• Use of n sin θ = constant (1)	$\tan \theta = 3.1 \text{ cm} / 35 \text{ cm}$ $\theta = 5.06^{\circ}$	
	• $n = 1.42$ (1)	$n = \sin 7.2^{\circ} / \sin 5.06^{\circ}$ n = 1.42	3

Q8.

Question Number	Acceptable answers		Additional guidance	Mark
	 Use of lens equation 1/f = 1/v + 1/u Use of magnification = v/u Magnification = 15 	(1) (1) (1)	Example of calculation 1/17.9 mm = 1/v + 1/16.7 mm v = (-)249 mm magnification = 249 mm / 16.7 mm = 14.9	3

Q9.

		Additional guidance	Mark
• Use of $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$ with $u = 100$ and $v = (-)300$	(1)	(MP3 dependent on MP2)	
 f = 150 (mm) converging lens with focal length 150 mm 	(1) (1)	$\frac{\text{Example of calculation}}{\frac{1}{f}} = \frac{1}{100 \text{ mm}} - \frac{1}{300 \text{ mm}}$	
		$\frac{1}{f} = \frac{3 - 1}{300 \text{ mm}}$ $f = 150 \text{ mm}$	
		MP3 accept if annotated in question Accept convex for converging	3

Q10.

Question Number	Acceptable Answers	Additional guidance	Mark
	• Use of $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$ (1) • $f = 8.0 \times 10^{-2} \text{ m}$	Example of calculation $\frac{1}{f} = \frac{1}{0.09 \text{ m}} + \frac{1}{0.75 \text{ m}}$ $f = 8.00 \times 10^{-2} \text{m}$	2

Q11.

Question Number	Acceptable answers	Additional guidance	Mark
	Light strikes the edges of the long crystals at angles greater than the critical angle		2
	It is repeatedly totally internally reflected along the crystal		

Q12.

Question Number	Acceptable answers		Additional guidance	Mark
	• Use of $P = \frac{1}{f}$ • 1220 (mm)	(1) (1)	Example of calculation $0.82 D = 1/f$ $f = 1 / 0.82 D = 1.22 m$ Accept 122 (cm)	2

Q13.

Question Number	Acceptable answers		Additional guidance	Mark
	difference in speed for air to comea much greater than difference in speed from water to comea Or lower refractive index for water to comea (= 1.03) so less refraction Or so power of eye/comea reduced Or so focal length of eye/comea increased	(1) (1)	MP1: Seeing values of refractive index as 1.03 and 1.38 is not enough, a comparison is required.	
	 if goggles worn the interface is with air and refraction is as normal Or if goggles worn the interface is with air and image focused on retina 	(1)		3

Q14.

Question Number	Acceptable Answer		Additional Guidance	Mark
	Use of $m = \frac{\text{image height}}{\text{object height}}$	(1)		
	• Use of $\frac{1}{u} + \frac{1}{v} = \frac{1}{f}$	(1)	For MP2 allow $(u \approx f, \text{ so}) v = f \times \text{magnification}$	
	• ∴ v = 28 m	(1)		3
			Example of calculation $ \frac{v}{u} = \frac{h_{i}}{h_{o}} = \frac{0.75 \text{ m}}{4.0 \times 10^{-3} \text{m}} = 187.5 $ $ \frac{1}{u} + \frac{1}{v} = \frac{1}{f} $ $ \therefore \frac{v}{u} + 1 = \frac{v}{f} $ $ \therefore v = (187.5 + 1) \times 15.0 \times 10^{-2} \text{m} = 28.3 \text{ m} $	

Q15.

Question Number	Acceptable Answers		Additional guidance	Mark
	Two straight lines drawn extrapolated from diverging rays meeting at a single point on the principal axis focal length = (-) 2.3 to 2.4 cm	(1) (1)	Accept dotted or solid lines	2

Q16.

Question Number	Acceptable answers		Additional guidance	Mark
(i)	the angle of incidence in an (optically) denser medium at which the angle of refraction (in the less dense medium) is 90° Or the greatest angle of incidence in an (optically) denser medium at which there is an emergent ray (into the less dense medium) Or the greatest angle of incidence in an (optically) denser medium at which there is a refracted ray (in the less dense medium)	(1)	Other equivalent answers may be given Do not accept answers stating or implying that the critical angle is the smallest angle at which total internal reflection occur, e.g., 'The smallest angle at which t.i.r. takes place', but do not automatically exclude answers on the basis of mentioning internal reflection alone without the inclusion of 'total' 'The greatest angle before t.i.r. takes place' is not sufficient	1
(ii)	 Use of sin C = 1 / n C = 41° 	(1) (1)	Example of calculation $\sin C = 1/1.52$ $C = 41.1^{\circ}$	2

Q17.

Question Number	Acceptable Answe	r	Additional Guidance	Mark
	• use of $n = c/v$ (• use of sin $C = 1/n$ (1)	Example of calculation $n = (3.00 \times 10^8 \text{ m s}^{-1}) / (2.25 \times 10^8 \text{ m s}^{-1})$	
	. C = 40.00 as TID	1)	n = 1.33	
	does not occur	1)	$\sin C = 1 / n = 1 / 1.33$ $C = 48.8^{\circ}$	
				(3)

Q18.

Question Number	Acceptable Answers	Additional Guidance	Mark
	 use of 1/v + 1/u = 1/f (1) use of magnification = v/u (1) 	Example of calculation 1/v = 1/7.0 - 1/5.0 v = 17.5 cm M = 17.5 / 5.0 = 3.5	
	 magnification = 3.5 (1) 		3

Q19.

Question Number	Acceptable Answers		Additional guidance	Mark
	 Use of \(\frac{1}{u} + \frac{1}{v} = \frac{1}{f}\) Use of \(P = \frac{1}{f}\) \(P = 46 \text{ D / Dioptre / dioptre}\) 	(1) (1) (1)	Accept MP2 if you see $\frac{1}{25}$ or $\frac{1}{2.4}$ for $\frac{1}{f}$ Example of Calculation $\frac{1}{0.25} + \frac{1}{0.024} = 46 \text{ D}$	3

Q20.

Question Number	Acceptable Answers	Additional Guidance	Mark
(i)	 measure angle of incidence at edge (53°) (1) use of n₁ sinθ₁ = n₂sinθ₂ (1) value of angle in glass = 32° (1) 	$\pm 1^{\circ}$ tolerance Allow ecf for candidate's value Example of calculation: $1 \times \sin 53^{\circ} = 1.5 \times \sin \theta_2$ $\theta_2 = 32^{\circ}$	3
(ii)	show refraction towards normal entering glass and how refraction away from normal exiting glass (1)		1

Q21.

Question Number	Answer	Mark
(a)	Change in direction of wave (accept ray or any named wave)	
	(do not accept bend) (1)	
	(Due to) change in (optical) density / speed / medium (1)	2

$th\underline{eon line} physic stutor.com$

Question	Answer		Mark
Number			
(b)	There is no change in direction for the light (passing between the water and the gel) Or There is no refraction (as the light passes between the water and the gel) (accept within the beaker)	(I)	
	The light must have the same/similar wave speed in the water and gel (accept same/similar density for water and gel)	(1) (1)	2

Q22.

Question Number	Acceptable Answers		Additional Guidance	Mark
(i)	Appropriate line of best fit	(1)		1
(ii)	 Calculates a gradient using at least half the drawn line η=1.37 to 1.47 leading to a conclusion that glass is silica Or conclusion consistent with their value for η 	(1) (1) (1)	$\frac{\text{Example of calculation}}{\frac{0.9 - 0.05}{0.58}} = 1.47 \text{ silica}$	3

Q23.

Question Number	Acceptable Answer		Additional Guidance	Mark
	 use of 1/v + 1/u = 1/f and P = 1/f to determine power required 		Example of calculation 1/f = 1/0.02 cm + 1/0.275 cm f = 0.0186 cm P = 1/f = 53.6 D For person, $P = 1/0.0193$ = 51.81	
	 use of P = 1/f to determine power of person's lens 	(1)	Spectacle power = 53.63 - 51.81 = 1.82 D Choose +2.0 D	
	 use of P = P₁ + P₂ to determine additional power required 	(1)		
	• P = 1.82 (D)	(1)		(4)

theonlinephysicstutor.com

Question Number	Acceptable answers		Additional guidance	Mark
	 use of P = 1/f use of P = P₁ + P₂ etc total power = 63.8 (D) Comparative statement consistent with their values 	(1) (1) (1) (1)	MP4 An attempt at a % must be made and a clear comparison with the 80% must be made e.g % for comea from $44.8 / 63.8$ is 71% which is not 80% so no Example of calculation $P_{\text{comea}} = 1/0.0223 \text{ m} = 44.84 \text{ D}$ $P_{\text{lens}} = 1/0.0527 \text{ m} = 18.98 \text{ D}$ Total power = 63.82 D	4

Q25.

Question Number	Acceptable answers		Additional guidance	Mark
(i)	 • Rays from (a point) on the moon are <u>parallel</u> • So the rays converge to the principal focus Or so the image is formed at the principal focus Or • Use of ¹/_f = ¹/_u + ¹/_v with u=∞ or very large • f = v 	(1) (1) (1) (1)	Description of focal length as: the distance between the lens and point at which parallel rays will converge (after passing through lens), scores 2 Accept focal point for principal focus (MP2 dependent on MP1)	
				2

Question Number	Acceptable answers	Additional guidance	Mark
(ii)	Real Diminished (2)	One/Two properties scores 1 mark Three properties score 2 marks	
	Inverted	Accept smaller Accept upside down	,

Q26.

Question Number	Acceptable answers	Additional guidance	Mark
(i)	Two construction rays from: ray from tip of object parallel to principal axis drawn then refracted through the focal point (1) ray drawn from tip of object through centre of lens (1) ray drawn from focal point through tip of object and then refracted parallel to the principal axis (1) And rays extended back to locate tip of image on the same side as the object (1)	Example of diagram:	3

Question Number	Acceptable answers	Additional guidance	Mark
(ii)	 Use of m = v/u (1) Use of \(\frac{1}{u} + \frac{1}{v} = \frac{1}{f}\) and substituting for v or u (1) u = 6.1 cm (1) 	Example of calculation: $\frac{v}{u} = -3.5 \therefore v = -3.5u$ $\frac{1}{u} + \frac{1}{-3.5u} = \frac{1}{8.5} \therefore \frac{3.5 - 1}{3.5u} = \frac{1}{8.5} \qquad \therefore \frac{3.5u}{2.5} = 8.5$ $u = \frac{8.5 \times 2.5}{3.5} = 6.07 \text{ cm}$	3

Q27.

0 1			4.7314 3 43	
Question	Acceptable Answers		Additional guidance	
Number				
(i)	 One ray correctly drawn Second ray correctly drawn Completes diagram with image at position 3.6 to 3.8 cm and height of 0.7 to 0.8 cm 	(1) (1) (1)		3
(ii)	 Use of m = v/u or m = image height object height using values from (a)(i) Magnification of 0.47 to 0.53 	(1) (1)	Example of Calculation $m = \frac{v}{u} = \frac{3.7}{7.5} = 0.5$	2
(iii)	Real and image on different side of converging lens to object Or rays pass through the image	(1)		1

Q28.

Question Number	Acceptable Answers		Additional guidance	Mark
(i)	 Use of n₁ sin θ₁ = n₂ sin θ₂ using angle of incidence = 20° r(blue) = 31.3° and r(red) = 31.1° 	(1)	Example of Calculation sinr(blue) = 1.517sin20 = 0.519 $r(blue)=sin^{-1}(0.519) = 31.3^{\circ}$	
	Or Calculates difference between $r(\text{blue}) \text{ and } r(\text{red}) = 0.2^{\circ}$	(1)	$\sin r (\text{red}) = 1.509 \sin 20 = 0.516$ $r (\text{red}) = \sin^{-1}(0.516) = 31.1^{\circ}$	
	Compares their answer to an uncertainty of protractor of 0.5° with conclusion consistent with their answer	(1)	31.3° - 31.1° = 0.2° 0.2° < 0.5° so protractor is unsuitable	3

theonlinephysicstutor.com

(ii)	Either		Example of Calculation	
	 Use of sinC = 1/n 41.5° Compares their answer to 35° and concludes that red light is not totally internally reflected or conclusion consistent with their answer 	(1) (1)	$\sin C = \frac{1}{1.509} = 41.5^{\circ}$ $C > 35^{\circ}$ so red light is not totally internally reflected	
	 Or Use of n₁ sin θ₁ = n₂ sin θ₂ with 35° and n=1 60° Compares their answer to 90° with conclusion that red light is refracted or conclusion consistent with their answer 	(1) (1)		3

Q29.

Question Number	Acceptable Answers	Additional Guidance	Mark
(i)	An explanation that makes reference to:	These marks can be awarded only for answers in the context of the method described in the question.	
	holding the lens steady in your hand would be difficult and would make the distance measurement inaccurate (1)		
	so the lens should be in a holder on a stable surface to make the measurement accurate (1) OR	Reference to use of an optical bench is acceptable. Reference to use of a clamp is	
	holding the ruler steady parallel to the principal axis would be difficult and make the distance measurement inaccurate (1)	acceptable.	
	so the ruler should be on a stable surface to make the measurement accurate (1)		
	OR		
	focal length is image distance when object distance is infinite (1)		2
	this is not at infinity so lens formula should be used (1)		
(ii)	 use of power = 1/focal length (1) calculates at least two powers correctly (1) analyses data to compare powers or focal lengths (1) 	This is a comparison, so use of cm not penalised if used for all and unit D is not required. MP3 calculates combined power and uses it to calculate focal length for the combination and compares this with the measured value of focal length.	
	draws a conclusion that is consistent with calculated values about how well the relationship is supported (1)	Example of calculation: P = 1/f power lid = 1/0.12 = 8.3 D power optional = 1/0.175 = 5.7 D power combined = 1/0.07 = 14 D 8.3 + 5.7 = 14 D	4

Q30.

Question Number	Acceptable answers		Additional guidance	Mark
	 Two rays correctly drawn including extrapolation Completes diagram with image at 10.6 cm (range 9.0 cm to 12.0 cm) Magnification = 3.8 (3.5 to 4.0) Conclusion consistent with values for distance and M 	(1) (1) (1)	Acceptable rays: • from arrowhead on object through the optical centre of the lens • from arrowhead on object parallel to the axis up to the lens and then through the principal focus on the other side • from the principal focus on the same side and through the arrowhead on the object to the lens and then parallel to the axis Example of calculation M = image size / object size (accept use of distances) = 8.0 cm / 2.0 cm = 4.0	4

Q31.

Question Number	Acceptable answers	Additional guidance	Mark
(i)	• use of $1/f = 1/u + 1/v$ (1)	Example of calculation 1/1.6 cm = 1/u + 1/2.4 cm	
	• $u = 4.8 \text{ cm}$ (1)	u = 4.8 cm	2

Question Number	Acceptable answers	Additional guidance	Mark
(ii)	• use of $n = c/v$ (1) • use of $n_1 \sin \theta_1 = n_2 \sin \theta_2$ Or $n = \sin i/\sin r$ with correct angles • $\theta = 11^\circ$ (1)	Accept use of $v_2 \sin\theta_1 = v_1 \sin\theta_2$ for MP1 and MP2 but $v_1 \sin\theta_1 = v_2 \sin\theta_2$ scores neither Example of calculation $n = 3 \times 10^8 \text{ m s}^{-1} / 2.18 \times 10^8 \text{ m s}^{-1}$ = 1.376 $1 \times \sin 15^\circ = 1.376 \times \sin \theta$ $\theta = 10.8^\circ$	3

Q32.

Question Number	Acceptable Answer		Additional Guidance	Mark
	 increasing the current through the coil increases the heating effect 	(1)		
	this causes the resistance of the coil to increase (due to the collisions between conduction electrons and lattice ions)	(1)		
	so for a given p.d. this would result in the current decreasing	(1)		
	 this would increase the focal length of the lens, hence the need to limit the current 	(1)	MP4 conditional mark, dependent on MP3 being awarded	(4)

Q33.

Question Number	Acceptable Answers	Additional guidance	Mark
	• Use of $m = \frac{v}{u}$ (to calculate m) (1) • Use of $m = \frac{\text{image height}}{\text{object height}}$ to calculate distance between dots on screen (1) • Uses tan/sin or small angle approximation to calculate the angle (1)	Example of calculation $m = \frac{0.75 \text{ m}}{0.09 \text{ m}} = 8.3$ Image height = 8.3 x 0.005 m = 0.042 (m) $\tan(\frac{\theta}{2}) = \frac{0.042/2 \text{ m}}{4.5 \text{ m}}$ $\theta = 0.5^{\circ} = \frac{0.5\pi}{180} \text{ rads} = 0.0092 \text{radians}$	
	Answer consistent with their calculation (1)	0.009 radians > 0.0003 radians so student can distinguish between the dots	5
	• Comparison with 0.0003 radians or 0.017° and conclusion consistent with their value for θ (1)		5

Q34.

Question	Acceptable Answers	Additional guidance	Mark
Number	imaaa haiaba	7	
	• Use of $m = \frac{image\ height}{object\ height}$	Example of Calculation	
	. II C V	$m = \frac{3.5 \times 10^{-3} \mathrm{m}}{2.0 \times 10^{-4} \mathrm{m}} = 17.5$	
	• Use of $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$	$v = 17.5 \times 5.0 \times 10^{-2} \text{m} = 0.875$ (m)	
	• Use of $P = \frac{1}{f}$	$\frac{1}{f} = \frac{1}{5.0 \times 10^{-2} \mathrm{m}} + \frac{1}{0.875 \mathrm{m}}$	
	• 21 D	1) $ P = \frac{1}{0.047 \text{ m}} = 21.1 \text{ D} $	5

Q35.

Question Number	Acceptable Answers		Additional guidance	Mark
	 Light is refracted as it passes into medium 2 Angle of refraction may be calculated using n₁sinθ₁ = n₂sinθ₂ Angle of refraction = 89.81° Angle of incidence at layer 2-3 is greater than the critical angle So total internal reflection occurs (at layer 2-3 interface) So light/ rays appear to come from surface of road (so that observer sees mirage) 	(1) (1) (1) (1) (1)		6

Q36.

Answer		Mark
Measure angles of incidence and refraction (clear variants accepted or correct angles shown on a diagram)('i' and 'r' accepted)	(1) (1)	
Plots $\sin i$ vs $\sin r$ Correct gradient identified for their graph (assume $\sin i$ on y axis unless stated otherwise, assume statements using 'vs' or 'against' state y axis first) [If angle of reflection referred to instead of refraction, only allow 2^{nd} mark] (Allow 3^{rd} but not 2^{nd} mark if i vs r and point from line used in $\mu = \sin i$ / $\sin r$)	(1)	3
angle of incidence (for light travelling from denser medium) has angle of refraction of 90° (may refer to leaving along surface/boundary)	(1) (1)	2
Use of $\mu = \sin i / \sin r$ (accept stating $\sin c = 1 / \mu$) $c = 49^{\circ}$ (n.b. ue applies)	(1) (1)	2
Example of calculation $\sin c = 1 / \mu = 1 / 1.33$ $c = 49^{\circ}$		5
	Measure angles of incidence and refraction (clear variants accepted or correct angles shown on a diagram) ('i' and 'r' accepted) Plots $\sin i$ vs $\sin r$ Correct gradient identified for their graph (assume $\sin i$ on y axis unless stated otherwise, assume statements using 'vs' or 'against' state y axis first) [If angle of reflection referred to instead of refraction, only allow $2^{\rm nd}$ mark] (Allow $3^{\rm rd}$ but not $2^{\rm nd}$ mark if i vs r and point from line used in $\mu = \sin i / \sin r$) angle of incidence (for light travelling from denser medium) has angle of refraction of 90° (may refer to leaving along surface/boundary) Use of $\mu = \sin i / \sin r$ (accept stating $\sin c = 1 / \mu$) $c = 49^{\circ}$ (n.b. ue applies) Example of calculation $\sin c = 1 / \mu = 1 / 1.33$	Measure angles of incidence and refraction (clear variants accepted or correct angles shown on a diagram) ('i' and 'r' accepted) (1) Plots $\sin i$ vs $\sin r$ Correct gradient identified for their graph (assume $\sin i$ on y axis unless stated otherwise, assume statements using 'vs' or 'against' state y axis first) [If angle of reflection referred to instead of refraction, only allow y and y are formula y and y and y and y are formula y and y are formula y and y are for

Q37.

Question Number	Acceptable Answers		Additional Guidance	Mark
(i)	 use of n₁sin i₁ = n₂sin i₂ with angle of incidence in plastic = 28° 	(1) (1)	Example of calculation $n_1 \sin i_1 = n_2 \sin i_2$ 1.47 sin (90° – 62°) = 1.00 sin i_2 $i_2 = 43.6$ °	
	 angle of deviation = angle of refraction - angle of incidence 	(1)	angle of deviation = 44° - 28° = 16°	4
	 angle of deviation = 16° 	(1)		
(ii)	Going from the centre of the lens towards the edge the angle of incidence in the plastic increases	(1)		
	 The angle of deviation increases 	(1)	Accept focal point for principal focus	3
	 (So) all rays cross (the axis) at the principal focus 	(1)		

(a) • diagram with (1) illuminated object, lens, screen and metre rule			uneoniinepi	ilysics
illuminated object, lens, screen and metre rule		Acceptable Answer	Additional Guidance	Mark
adjusted until clear image located on screen • object, image (1) distances calculated from metre rule readings • procedure (1) repeated for at least 4 other positions of the lens	(a)	illuminated object, lens, screen and metre rule • lens position (1) adjusted until clear image located on screen • object, image (1) distances calculated from metre rule readings • procedure (1) repeated for at least 4 other positions of	Example of calculation: $\frac{1}{u} = -\frac{1}{v} + \frac{1}{f}$ $y = mx + c$	(4)

Question Number	Acceptable Answer	Additional Guidance	Mark
(b)	against 1/u and intercept(s) of line read off	1) Question 5 to be marked holistically 1)	
	• $f = 1/intercept$ (1)	(3)

Q39.

Question Number	Acceptable Answer	s	Additional Guidance	Mark
(i)	A ray diagram including: ray from top of object through centre of lens to retina	(1)		
	ray parallel to axis on one side of lens and through focal point on other side	(1)		
	distance to near point = 6.0 cm	(1)	Correct calculation scores MP3 only	(3)
Question Number	Acceptable Answer	A	dditional Guidance	Mark
(ii)	• use of $M = v/u$ (1)		mple of calculation 2 cm / 6 cm = 0.33	
	• $M = 0.33 (2/3)$ (1) sf) ecf u from (i)		-	
				(2)

Q40.

Question Number	Acceptable answers	Additional guidance	Mark
(a)	use of a correct ray (1)	Ray through the principal focus and	
	use of second (1) correct ray	Ray parallel to principal axis then through the principal focus	
	 indicates image formed where rays (1) cross 	Ray through the optical centre of the lens Example of diagram:	
	 image drawn is real, (1) inverted and diminished 	Object	
		¥	(4)

Question Number	Acceptable answers	Additional guidance	Mark
(b)	 use of 1/f = 1/v + 1/u (1) for u estimate 4 - 10 mm use of P = 1/f (1) P = (120 D to 230 D) (1) 	Example of calculation: Assuming the thickness of 8 mm: $1/f = 1/0.008 + 1/0.045$ $P = 1/f$ $P = 147 D$ Full credit for any thicknesses in range 4 - 10 mm	
			(3)

Q41.

Question	Answer		Mark
Number		130000	
(a)	change in direction / wavelength (of wave/ray/light) (when entering a medium where) the wave has a different velocity OR (when entering a medium where) the density is different	(1) (1)	
	the light travels at a lower speed in the air than in a vacuum	(1)	3
(b)	identify angle of incidence = 64° use of sin $i / \sin r$ = refractive index $r = 63.9^{\circ}$ to at least 3 sf	(1) (1) (1)	
	calculation of difference = 0.12° Example of calculation	(1)	4
	$\sin r = \sin i \div \mu$ $= \sin 64^{\circ} \div 1.001$ $r = 63.88^{\circ}$ $\lim_{n \to \infty} \frac{1.00}{n} = 0.128$		
	difference = 0.12° Total for question		7

Q42.

Question				
Number	Acceptable Answer		Additional Guidance	Mark
	• $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$, re-arranged to make $\frac{1}{v}$ the subject	(1)	$\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$ $y = mx + c$	
	 Comparison with y = mx + c 	(1)	y = mx c	
	So intercept equals 1/f	(1)		
	Use the y intercept to calculate a	(1) (1)		
	value for f	(1)		
	Comment on the agreement with the initial determination including an			
	appropriate justification	(1)		
	OR • Since $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$, when $\frac{1}{u} = 0$, $f = v$	(1)		
	• When $\frac{1}{v} = 0, f = v$	(1)		
	 Use the y intercept to calculate a value for f 	(1)		
	Use the x intercept to calculate a value for f	(1)		
	 Comment on the agreement with the initial determination including an appropriate justification 	(1)		
	OR			
	Read a pair of corresponding values			
	from the graph	(1)		5
	• Use of $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$ to calculate a value			
	$\operatorname{for} f$	(1)		
	Read a second pair of corresponding	(1)		
	values from the graph			
	• Use of $\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$ to calculate a			
	second value for f	(1)		
	 Comment on the agreement with the initial determination including an appropriate justification 	(1)		

Q43.

Question Number	Acceptable answers		Additional guidance	Mark
(a)	• Use of $n_1 \sin \theta_1 = n_2 \sin \theta_2$	(1)	Accept alternative method using	
	 Angle in cladding θ = 90(°) 	(1)	$\sin c = \frac{1}{n}$ and $n = \frac{c}{v}$ to give $n = \frac{v_{cladding}}{v_{core}}$ Or $n = \frac{c}{v}$	
	 Critical angle = 50.3(°) 	(1)	n _{core} n _{cladding}	
			Use of $\sin c = \frac{1}{n}$ with $n=1.2$ or 1.56 gains 1 mark	
			Example of calculation e.g. $1.56 \sin \theta_1 = 1.20 \sin \theta_2$	
			$1.56 \sin c = 1.20 (\sin 90^\circ)$	
			$\sin c = \frac{1.20}{1.56} c = 50.3(^{\circ})$	
				3

Question Number	Acceptable answers		Additional guidance	Mark
(b)	Left hand side of beam refracts away from normal	(1)	Ignore any line continued beyond cladding Ignore any reflection	
	Right hand side of beam totally internally reflected	(1)	Reflection correct by eye Do not award if any line shown in cladding	
	State Student C is correct	(1)	(MP3 dependent on MP1 and MP2)	
			cladding cladding cladding	
			Arrows on rays not needed	3

Question Number	Acceptable answers	Additional guidance	Mark
*	This question assesses a student's ability to show a coherent and logic structured answer with linkages and fully-sustained reasoning. Marks are awarded for indicative content and for how the answer is structured and shows lines of reason. The following table shows how the marks should be awarded for indicative content. Number of indicative marks awarded marking for indicative marking points seen in answer 6 4 5-4 3 3-2 2 1 1 0 0	The mark for indicative content shows be added to the mark for lines of reasoning. For example, an answer with five indicative marking points which is partially structured with sor linkages and lines of reasoning score 4 marks (3 marks for indicative	ne s

* (continued)	The following table shows how the man awarded for structure and lines of reason		
		Number of marks awarded for structure of answer and sustained line of reasoning	
	Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout	2	
	Answer is partially structured with some linkages and lines of reasoning	1	
	Answer has no linkages between points and is unstructured	0	

Question Number	Acceptable answers	Additional guidance	Mark
* (continued)	 a polarising filter restricts the (electric field) vibrations of the (transverse) light wave to a single plane including the direction of propagation of the light the light incident on the filter must be plane polarised when the angle of rotation is a multiple of π rad (including zero), the plane of polarisation of the incident light is perpendicular to the transmission axis of the polarising filter hence the intensity of the transmitted light is zero when the angle of rotation is an odd multiple of π/2 rad the plane of polarisation of the incident light is the same as that of the transmission axis of the polarising filter hence maximum light is transmitted the intensity of the transmitted light varies from a minimum to a maximum as the angle of rotation varies as shown by the graph

Q45.

			-
Question	Answer		Mark
Number			
(a)	(When light strikes a boundary with) angle of incidence greater than the critical		
	angle		
	Or When light within a denser medium strikes a boundary with a less dense		
	medium	(1)	
	All of the light is reflected		
	Or none of the light is transmitted		
	Or none of the light is refracted	(1)	2

Question Number	Answer	Mark
(b)(i)	Use of $\mu = \sin i / \sin r$ (1)	
	$x = 41(^{\circ}) \tag{1}$	2
	Example of calculation	
	$\sin x = \sin 60^{\circ} / 1.33$	
	$x = 40.6^{\circ}$	
(b) (ii)	Use of $\mu = \sin i / \sin r$ with $i = 90^{\circ}$ (accept stating $\sin c = 1 / \mu$) (1)	
	$c = 49(^{\circ}) \tag{1}$	2
	Example of calculation	
	$\mu = \sin 90^{\circ} / \sin c$	
	$\sin c = 1/\mu = 1/1.33$	
	c = 49°	
(b) (iii)	Angle in gel \leq critical angle Or angle $y \leq$ critical angle	
	Or (If angle $x = \text{angle } y$, then this corresponds to an) angle in air of 60° (1)	
	Not total internal reflection so some light reaches screen	
	Or Light will be refracted/transmitted so some light reaches screen (1)	2

Q46.

Question Number	Answer		Mark
(a)	Credit any sensible limitation Examples include: • blunt pencil,	(1)	
	 protractor divisions only to one degree, protractor of limited radius 		
	method requires rays to be marked and then drawn on Limited precision – linked to limitation	(1)	2
(b)	Use of refractive index = ratio of speeds Speed = $2.0 \times 10^8 \text{ m s}^{-1}$	(1) (1)	2
	Example of calculation speed in plastic = 3.0×10^8 m s ⁻¹ ÷ 1.52 = 1.97×10^8 m s ⁻¹		
(b)(ii)	Use of $\sin c = 1/\mu$, $\sin c = 1/n$ (or equivalent, but must allow full solution if used correctly without further equations) critical angle = 41°	(1) (1)	2
	Example of calculation $\sin c = 1/1.52$ $c = 41^{\circ}$		
*(c)	(QWC – Work must be clear and organised in a logical manner using technical wording where appropriate)		
	The light strikes the sides at an angle greater than the critical angle	(1)	
	It undergoes total internal reflection	(1)	
	It is reflected again It strikes the other end at less than the critical angle Or It is transmitted at the final boundary Or the ray has zero angle of incidence at the first end and is transmitted	(1)	
	undeviated	(1)	4
	Total for question		10

Question Number	Acceptable Answers		Additional guidance	Mark
(i)	 Focus image of distant/far object on to a screen 	(1)	MP2 dependent on MP1	
	 Measure distance from lens to screen 	(1)		
	Or			
	 Use <u>parallel</u> rays of light 	(1)		2
	 Measure distance from lens to 	(1)		
	the point where the rays			
	converge			
(ii)	Greater <u>refraction</u>	(1)		
	 To converge (parallel) rays at a 	(1)		2
	point closer to the lens			_
(iii)	 Photograph 2 has a greater magnification 	(1)		
	 so v is greater 	(1)		
	 since u is constant 	(1)		
	 So f is greater 	(1)	MP5 dependent on MP2 and	
	 Hence photograph 2 taken with lens of focal length 200 mm 	(1)	MP4	5

Q48.

Question Number	Acceptable Ansv	vers	Additional Guidance	Mark
(i)	 drag + weight = upthrust use of ρ = m/V 		Example of calculation: drag + weight = upthrust drag = upthrust - weight 60000 = 400 ³ 0000003 -	
	and $W = mg$ • use of $F = 6\pi \eta rv$		6πηrv = 4πr3ρstoutg/3 - 4πr3ρqasg/3 v = 2(ρstout - ρgas)r2g/9η	
	and $V = 4/3\pi r^3$	(1)		(3)

Question Number	Acceptable Answers	Additional Guidance	Mark
(ii)	low speed <u>OR</u> laminar flow <u>OR</u> not turbulent flow		(1)

Question Number	Acceptable Answers	Additional Guidance	Mark
	 use of v = 2(ρ_{stout} - ρ_{gas})r²g/9η (1) use of v = s/t (1) time = 29 s (1) comment on the difference with 120 seconds OR an attempt to account for the difference 	Example of calculation: $v = 2 (1.007 \times 10^3 \text{ kg m}^{-3} - 1.223 \text{ kg m}^{-3}) \times (61 \times 10^{-6} \text{ m})^2 \times 9.81 \text{ N kg}^{-1}/9 \times 2.06 \times 10^{-3} \text{ Pa s}$ $= 3.96 \times 10^{-3} \text{ m s}^{-1}$ $t = 0.115 \text{ m}/3.96 \times 10^{-3} \text{ m s}^{-1}$ $= 29 \text{ s}$ Actual time much less than the manufacturers time therefore not a valid statement OR reference time to reach terminal velocity OR there is turbulent flow	(4)

Question Number	Answer		Mark
*(a)	(QWC – Work must be clear and organised in a logical manner using technicalwording where appropriate)		
	a standing/stationary wave	(1)	
	Waves from the generator are reflected at the end Or waves are travelling in both directions	(1)	
	(When the two) waves (meet they) superpose/undergo superposition	(1)	
	Producing points where the waves are in phase and points where they are in antiphase		
	Or producing points of zero amplitude and points of maximum amplitude OR producing nodes and antinodes	(1)	4
(b)	Wavelength = 2 × 1.8 m Use of speed = wavelength x frequency Speed = 1200 m s ⁻¹	(1) (1) (1)	3
	Example of calculation $\lambda = 2 \times 1.8 \text{ m}$ $v = 330 \text{ Hz} \times 3.6 \text{ m}$ $v = 1188 \text{ m s}^{-1}$		
(c)(i)	Point is a node, so zero amplitude OR Point is a node, so string not moving	(1)	
	So no energy absorbed Or Waves continue to move after superposition	(1)	2
(c)(ii)	(Original frequency x 2) = 660 Hz	(1)	1
(c)(iii)	Captured twice per cycle = 1320 Hz (allow ecf from (c) (iii)) If more than 1320 Hz will be captured at points other than max amplitude	(1) (1)	2
(d)	Scale divisions of 20 Hz Or Wide pointer Or nominal output (only)	(1)	
	Lack of precision (scale related) Or Lack of accuracy (output related)	(1)	2
	Total for question		14
